Picture your day with Smartify

The best smart-home features solve little frustrations you notice every day. Choose the moments that would make the biggest difference to you.

A brighter morning

Open compatible motorised curtains from a button or a planned routine.

A warmer welcome

Let a passage light come on when you walk in after dark.

An easier evening

Soften compatible dimmable lights for dinner, a film or time with family.

A simpler bedtime

Use a bedside scene button to control selected smart lights together.

You choose what happens

A scene is a group of actions you choose, such as dimming the living-room lights. Your installer sets it up around your preferences and supported devices.

Start with the room you use most

You do not need to automate the whole home at once. Begin with one useful routine, make it comfortable for everyone, then add more when you want to.

What should I buy first?

Pick the result you want. These starting combinations help you choose a direction; our team can confirm the right fit for your home.

Product family shown

Keep my switches. Add app control.

Layer Relay 1 - A discreet upgrade for a suitable light circuit. Add a compatible hub and professional installation; keep the wall style you already like.

Product family shown

Set the mood with softer lighting.

Layer Dimmer 1 - Choose brightness for reading, dinner or movie night. Needs dimmable lights, a compatible hub and installation; we can help check your lights.

Product family shown

Let the passage light welcome me.

Aware Motion - Add a compatible hub and a smart switch or relay for the light. Your installer sets when it turns on and how long it stays on.

Product family shown

Control bedtime from beside the bed.

Interface Scene - A battery-powered button for a chosen scene. Works with a compatible hub and lights or other devices that are already smart.

Not sure where to start?

Tap to chat on WhatsApp. Tell us your room and the everyday task you would like to make easier.

Bring your room together

The hub connects supported Smartify products so they can work as a system. Think of it as the meeting point for your lights, sensors and scene buttons.

Product family shown; finishes may vary

Core LAN

A starting point for connected rooms.
Bring supported Smartify switches and sensors together. It connects by cable to your home router.

Product family shown; finishes may vary

Core Matter

For a preferred smart-home app.
Ask about this option if you want supported Smartify devices in a Matter-compatible app. We will check your app and the features you want.

You do not need to choose a protocol first

Tell us the phone, smart speaker or app you already use. We can recommend the hub and devices that suit your routine. Compatibility depends on the exact products.

Ask us to show you your routine

Try the scene you want in the app you will use. Ask what still works when the internet is down, and how the lights behave after a power cut. Keep a convenient way to control them by hand.

Lighting for the way you live

Keep familiar wall controls while adding a more convenient way to use your lights. Start with the room where the right light matters most.

Product family shown; finishes may vary

Layer Relay 1

Switch a suitable light on or off.
Add app control and configured routines to an existing circuit, with the module fitted out of sight where the installation allows.

Product family shown; finishes may vary

Layer Dimmer 1

Choose a comfortable brightness.
Turn compatible dimmable lighting up for a task and down for a relaxed evening. Existing lights need a compatibility check.

Imagine it in your living room

Reading — A brighter setting for time with a book.

Movie night — A softer setting for the lights you choose.

Bedtime — A chosen group of smart lights turned off together.

Before ordering: our team or your electrician checks the lights, wiring and available space. Some homes need wiring or light upgrades; retrofit does not always mean no installation work.

A home that notices you

Let useful things happen without reaching for your phone. Sensors work with a compatible hub and the devices you want to control.

Product family shown; finishes may vary

Aware Contact

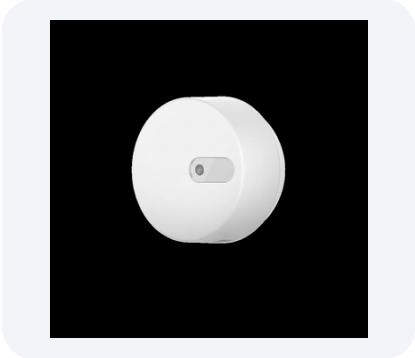

Know if a door is open.
Check a door or window state, or use it to start a chosen routine. Alerts depend on your app and connection.

Product family shown; finishes may vary

Aware Motion

Light the way.
Help a passage light come on when you enter and it is dark enough. Choose a comfortable switch-off delay.

Product family shown; finishes may vary

Aware Wave

Notice quieter moments.
Presence sensing for a room where you may sit still. Placement is adjusted to suit the room; USB power is needed.

Come home with your hands full

A motion sensor can tell a connected passage light to turn on. Set it to respond after dark, so it helps when you actually need it.

Make the routine feel natural

Try it with your family before finalising the settings. Keep a manual override and adjust unwanted triggers. These convenience features do not replace a dedicated security alarm.

Control that feels familiar

Choose what you want to touch every day: a wall switch, a bedside button or one shared screen. Everyone at home should find it easy to use.

Product family shown; finishes may vary

TAC 2

A familiar wall switch, made smarter.
Control two suitable lights or configure supported scenes. Choose a finish that works with your interiors.

Product family shown; finishes may vary

Interface Scene

Favourite routines within reach.
Place the battery-powered scene button by the bed or entrance. It controls configured smart devices through a compatible hub.

Product family shown; finishes may vary

TOQ 4T

Touch control for your room.
A glass touch option for supported lights and scenes. Brightness control needs a separate compatible dimmer.

Product family shown; finishes may vary

Interface 4

A shared screen for the household.
Manage supported devices and scenes from a wall touch panel, so everyday control is not tied to one person's phone.

Beyond the light switch

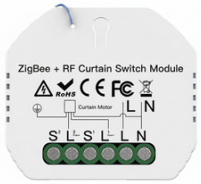

Make more of the things you already use. Curtains and remote-controlled appliances are worth considering once you know what would help your routine.

Illustrative interior

Curtains, with less effort

Layer Shutter lets you control a compatible motorised curtain, blind or shutter through your smart-home setup. Ask about a morning or evening routine. A suitable motor and track are needed; this module does not motorise an ordinary curtain on its own.

Product family shown

Bring supported remotes into your app

Reach IR sends remote-control commands to compatible ACs, TVs and other infrared appliances. Share the appliance model and a remote photo so we can check support. It needs 2.4 GHz Wi-Fi, power and a clear view of the appliance.

Keep the original remote handy. An IR command does not necessarily confirm the appliance's actual state.

Your first-room wish list

Write down what matters to you, then ask for a complete recommendation. You can take a photo of this page and send it to our team.

My first room and the routine I want to improve

What I want to keep: switches, lights, curtains or appliances

Who will use it: family, guests, children or older parents

My comfortable budget and preferred installation timing

Before you say yes to a quote

- [ ] The proposed setup does the routine I actually want
- [ ] I know what can stay and what needs changing
- [ ] Devices, hub, accessories, installation and GST are included or itemised
- [ ] Everyone has a simple way to control it without my phone
- [ ] Internet and power-cut behaviour have been explained
- [ ] Warranty, support and a demonstration are included or agreed

Build your first-room plan with us

Tap to send your priorities on WhatsApp. Start with what you need today.

Let us help you choose

You do not need a technical specification to get started. Tell us about your home and the moments you would like to make easier.

Connect with our team

Chat on WhatsApp for a Smartify product shortlist that suits your home.

Open WhatsApp / +91 79 4912 1212

Send us these three things

Your space	City, room and whether this is an existing home or a renovation.
Your everyday wish	For example: softer evening lighting or one button at bedtime.
A few useful photos	Room, switchboard exterior and any relevant appliance or remote. Do not open electrical fittings yourself.

About this guide

Product information and images: Smartify catalogue, reviewed 17 October 2026. Examples need compatible devices and setup. Images may show a product family; confirm the supplied model and finish. Interiors are AI illustrations. Ask for an installed quote; prices are not included here.

Explore product details at docs.smartify.in

For reference: Matter is an interoperability standard that can use Wi-Fi or Thread. Our team can help with the compatibility choices.
